

MECHANICAL

Case study

Bradford Grammar School

Bradford Grammar School is a case in point. Contracted for a part new build and complete refurbishment of the school's heating system, along with comfort cooling for their new pool complex and lecture theatres, we swung into action with a raft of mechanical and electrical services – and still had time to transform the Old Clock House into an efficient pre school facility. The project also involved new lighting, small power, fire alarms and sub mains distribution.

Now Bradford Grammar has a new boiler house serving the partly new heating system, comfortable lecture rooms with enough ventilation to keep pupils awake, and, of course, the perfect atmosphere for a refreshing swim!
